

Mykyta Tulubaiev

Full Stack Developer

+38 (097) 286 93 97 @ nikita.tulubaiev@gmail.com https://www.linkedin.com/in/linkwolf/ Kyiv, Ukraine

SUMMARY

Full Stack Developer with experience in building high-load CRM/ERP systems, e-commerce platforms, and custom web applications. Strong background in backend development (Laravel/Symfony), REST API design, and third-party integrations. Experienced in developing systems for digital agencies, logistics, and fintech products. Focused on performance, architecture, and business process automation. Actively engineer AI-augmented development workflows: built a CI/CD pipeline that automatically generates and updates project documentation via LLM API on each code change, and developed a custom Claude Code agent that accelerates codebase onboarding while significantly reducing token consumption. Actively use React for frontend development.

EXPERIENCE

Full Stack Developer

Traffic Squad

10/2022 - 05/2026 Kyiv, Ukraine / Remote

Company Description

- Developed a push notification platform for managing large-scale campaigns across multiple device types (PWA, Android, iOS). Implemented scheduled and event-triggered notifications, content management, and user activity tracking including registrations, deposits, installs, and custom events.
- Developed a CRM system for media buying teams, including expense tracking, offer analytics, and performance monitoring for teams, buyers, and team leads. Implemented ordering workflows for farming departments (accounts, proxies, etc.), automation for finance-related communication, farmer task tracking, and executive-level analytics dashboards.
- Developed a CRM system for account managers focused on advertiser and offer analytics, reporting by day/team/offer, campaign performance analysis, and detailed statistics across multiple time periods and parameters.
- Developed a task management system for creating, tracking, and controlling workflows between account managers and media buying teams.
- Developed a crypto management platform with multi-wallet integration, transaction monitoring, secure wallet creation, and protected fund management architecture without direct withdrawal access.
- Actively integrated AI-driven solutions into development workflows and internal business processes to improve automation and team efficiency.

EXPERIENCE

Full Stack Developer

Vezem Auto

📅 10/2021 - 10/2022 📍 Kyiv, Ukraine

Company Description

- Developed and maintained internal CRM/ERP systems for a vehicle logistics and car delivery company, automating transportation workflows across multiple regions.
- Implemented a fleet and driver management system with real-time delivery status tracking, route monitoring, logistics control, and operational analytics.
- Built tools for managing vehicle auctions, customer orders, transportation cost calculations, and delivery timeline control.
- Integrated external APIs and partner services for vehicle data synchronization, notification automation, and logistics process management.
- Created analytical dashboards and reporting systems for management, including delivery performance, driver efficiency, expenses, and key operational metrics.
- Optimized internal business processes by automating routine tasks, reducing order processing time, and improving overall team productivity.
- Participated in system architecture design, backend development, database optimization, and maintenance of high-load internal platforms.
- Collaborated closely with logistics and operations teams to quickly implement new features and improve existing workflows based on business requirements.

Full Stack Developer

Digital Agency Linkwolf

📅 04/2019 - 04/2021 📍 Kyiv, Ukraine

Company Description

- Development and maintenance of web applications and client websites for a digital agency, including e-commerce platforms, landing pages, and corporate websites.
- Built e-commerce solutions featuring product catalogs, shopping carts, checkout systems, and integration with payment gateways and delivery services.
- Developed custom CMS and admin panels for managing content, products, orders, and users.
- Integrated third-party services and APIs (payment systems, CRM platforms, analytics tools, email/SMS services) to extend project functionality.
- Improved website and e-commerce performance through optimization techniques such as caching, database optimization, and load speed improvements.
- Implemented responsive UI development with a strong focus on UX/UI and conversion rate optimization.
- Provided ongoing support and feature development for existing projects based on client and business requirements.
- Participated in the full development lifecycle: from estimation and system design to deployment and long-term maintenance.

Back End Developer

WebStars

📅 06/2018 - 12/2018 📍 Kyiv, Ukraine

Company Description

- Development of modules and extensions for OpenCart 2.3 CMS to meet e-commerce business requirements.
- Maintenance and enhancement of existing online stores, including bug fixing and implementation of new features.
- Integration of third-party services such as payment gateways, delivery systems, and analytics tools into OpenCart-based stores.
- Optimization of online store performance, improving system stability and overall user experience.
